# Signature SPOUTS

## MINIMUM RESTRICTION

The 15° and 45° angles facilitates sap flow and prevents residues or unwanted bacteria from accumulating.

## PERFECT SEAL

Resin conforms to the shape of the tap hole and adheres to the bark.

## SPOUT LENGTH SUITS ALL BARK THICKNESSES

Thin wall maximizes sap flow while minimizing tree damage.

## WHITE SPOUTS, 7% BETTER PERFORMANCE

Please contact your CDL store or CDL online store for more information and prices.

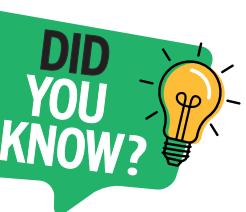

### ACCORDING TO A STUDY FROM THE ACER CENTER

When comparing sap yield, the white Maxflow spout gave a **SAP VOLUME 7% HIGHER** than the black Maxflow spout.

### CONCLUSION OF THE STUDY

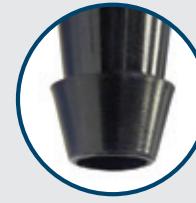

In the studied sugarbush, white spouts gave a higher volume of sap compared to the black spouts.

This increase, recorded in the last part of the season, would be related to the color of the spout and its thermal absorption properties.

## BETTER GRIP ON TUBING!

The line of **5/16"** **Maxflow** fittings was specifically designed and developed for maple producers wanting to operate **over 25 in-hg** (**high vacuum**). These fittings enable a perfect seal with a vacuum level beyond 25 in-hg and offers the following advantages:

- > No parting lines on the first barb.
- > Precision moulding.
- > Eliminates micro-leaks caused by molding lines.
- > Better grip on the tubing.

### PRACTICAL TIPS FOR SETTING UP 3/16" GRAVITY TUBING!

- Minimum 3-5% slope
- The steeper the slope, the better the vacuum
- The weight of the water column in the 3/16" line creates the vacuum
- The system must be 100% airtight
- Keep lines as straight as possible
- Approximately 25 taps per 3/16" line
- Material cost is about \$5 per tap
- 3/16" tubing is not compatible with a vacuum pump setup!

## INTELLIGENT VS REMOTE CONTROL

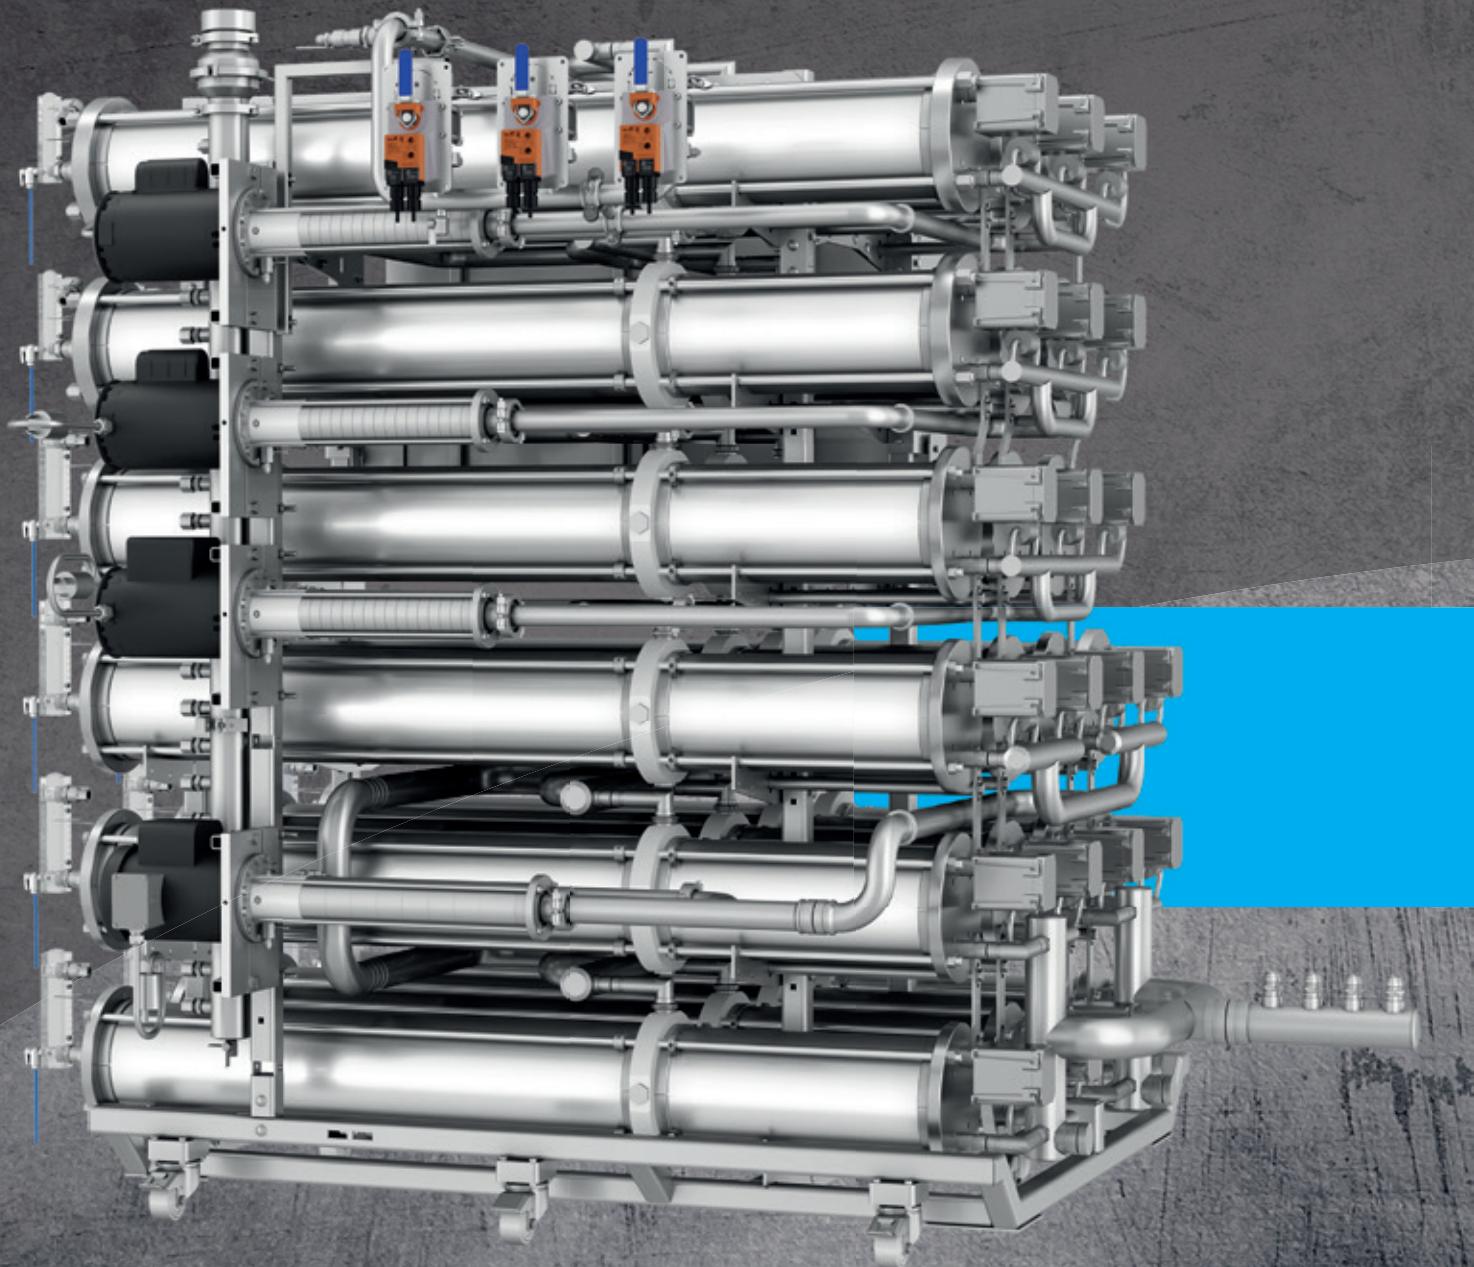

If your model is Intelligent, you will automate and manage 100% remotely all the features of your concentrator according to the defined parameters. If your model is Manual, you can add control modules that allow you to perform certain functions remotely. However, this does not make it intelligent; you will have to perform the actions one after the other through the interface. This will require supervision.

### ADVANTAGES (15" presses)

- > Tightening with a 12 ton hydraulic cylinder with food grade oil, pneumatic or manually operated (not necessary to have compressed air);
- > Drip tray connected to the pump (Useful for closed loop de-sugaring or for pumping syrup from the tray);
- > Bypass valve installed on the front plate for greater efficiency;
- > Drainage of the inlet and outlet in the drip tray through the front plate;
- > Air drainage (optional);
- > Reverse air flow in the press outlet to extend filtration (optional).

**AIR INLET KIT:** Allows air to be pushed through the inlet to drain the syrup remaining in the filter press at the end of filtration.

**AIR OUTLET KIT:** When the filter press is partially blocked and the syrup flow slows, this option allows air to be pushed through the outlet to replace the contents of the filter press to extend the operating time before cleaning.

### ADVANTAGES (20" presses)

- > Easy paper installation
- > Larger filtration capacity
- > Frame on wheels
- > Syrup pan underneath
- > Filtration capacity between 15 to 50 barrels
- > Hollow plates 3" thick

# CDL'S VALUES

Since 1991, CDL has grown guided by values that mirror the maple tree itself:  
**solid, authentic and deeply rooted.**

**Family, fairness, integrity, respect, simplicity, and pride**  
shape who we are and how we work together, day after day.

And if these 35 years have taught us anything,  
it's that maple sugaring is, above all, a story of connection.  
Thank you to all who share and help grow this story with us,  
one spring at a time.
